

Data Dictionary – MedTourEasy Dataset

dim_patients.csv

- patient_id (int) – Unique patient identifier
- date_of_birth (date) – Patient birth date
- country (string) – Country of residence
- gender (string) – Male / Female / Other/Unknown
- language (string) – Preferred language
- membership_tier (string) – Bronze / Silver / Gold

dim_treatments.csv

- treatment_id (int) – Unique treatment ID
- treatment_name (string) – Name of procedure
- category (string) – Orthopedic, Dental, Cardiac, Cosmetic, Oncology, Fertility
- avg_cost_usd (int) – Average cost in USD
- typical_recovery_weeks (int) – Expected recovery duration

dim_hospitals.csv

- hospital_id (int) – Unique hospital ID
- name (string) – Hospital name
- city (string) – City in India
- accreditation (string) – JCI / NABH / None
- international_patient_volume (string) – High / Medium / Low
- overall_rating (float) – 2.0 to 5.0
- hospital_tier (string) – Tier 1 / Tier 2 / Tier 3 (derived from accreditation, volume, rating)

fact_inquiries.csv

- inquiry_id (int) – Unique inquiry ID
- patient_id (int) – Foreign key to dim_patients
- treatment_id (int) – Foreign key to dim_treatments
- inquiry_datetime (timestamp) – When inquiry was received
- first_response_datetime (timestamp) – First response time (nullable)
- channel (string) – WhatsApp / Phone / Web / Email
- marketing_source (string) – Google / Facebook / Partner / Direct / Referral
- response_time_minutes (float) – Minutes to first response (nullable)

- hospital_id (int, nullable) – Preferred hospital

fact_consultations.csv

- consultation_id (int) – Unique consultation ID
- inquiry_id (int) – Foreign key to fact_inquiries
- consultation_date (date) – Date of consultation
- consult_duration_minutes (int) – Duration in minutes
- doctor_id (int) – Internal doctor identifier
- patient_satisfaction_pre (int) – 1–10 rating before treatment

fact_bookings.csv

- booking_id (int) – Unique booking ID
- inquiry_id (int) – Foreign key to fact_inquiries
- booking_date (date) – Date of booking
- package_cost_usd (int) – Cost of booked package
- travel_assistance (string) – Yes / No
- visa_assistance (string) – Yes / No
- expected_treatment_start_date (date) – Planned start date

fact_treatment_outcomes.csv

- outcome_id (int) – Unique outcome record
- booking_id (int) – Foreign key to fact_bookings
- treatment_start_date (date) – Actual start date
- treatment_end_date (date, nullable) – Actual end date
- completion_status (string) – Completed / Incomplete / Cancelled / Ongoing
- patient_rating (int, nullable) – 1–5 rating after treatment
- complications_flag (string) – Yes / No

fact_followups.csv

- followup_id (int) – Unique follow-up ID
- booking_id (int) – Foreign key to fact_bookings
- followup_date (date) – Date of follow-up
- followup_type (string) – Phone / Email / WhatsApp
- patient_response (string) – Positive / Neutral / Negative / No response
- repeat_inquiry_flag (string) – Yes / No

marketing_spend.csv

- month_year (date) – First day of the month
- channel (string) – Marketing channel name
- spend_usd (int) – Monthly spend in USD
